1 BACKGROUND

In accordance with the Federal Bureau of Investigation's (FBI's) Uniform Crime Reporting (UCR) Program, the *National Incident-Based Reporting System (NIBRS) XML Developer's Guide* serves as a developmental aid. The UCR system supports the FBI's ability to collect, analyze, and report on national crime statistics.

The UCR system includes functionality to process National Incident-Based Reporting System (NIBRS) data submitted in Extensible Markup Language (XML) format. The XML schema uses the National Information Exchange Model (NIEM) structure. NIEM provides a standard set of elements for communicating between government organizations. This guide captures the requirements for the NIBRS XML format in alignment with technical aspects and documentation identified below:

- *NIBRS Addendum for Submitting Cargo Theft Data*, January 2010
- *NIBRS Addendum for Submitting Law Enforcement Officers Killed and Assaulted (LEOKA) Data*, October 2002
- *NIBRS Addendum for Submitting Additional Location and Property Data Values*, March 2010
- *UCR State Program Bulletins*, 1999–2013
- XML Information Exchange Package Documentation (2020.1), 2019
- *UCR Program Quarterly* 2014-present

Some of the information captured in the documents referenced above has not been included in this guide since it pertains to policy or user training and not to the technical implementation of a NIBRS system. This policy and training-related information will be included in the *NIBRS User Manual*.

2 NIBRS INFORMATION EXCHANGE PACKAGE DOCUMENTATION (IEPD) INTRODUCTION

The *NIBRS IEPD* is a separate set of documents, spreadsheets, and XML schemas that provide basic information about the NIBRS XML format. This guide is meant to be used in conjunction with the *NIBRS IEPD* and the *NIBRS User Manual*. The following describes the different features of the *IEPD*:

NIBRS Code Tables provides acceptable element inputs for NIBRS submissions along with corresponding codes.

XML Mapping spreadsheet with tables provide mappings between NIBRS element names, numbers, path, and cardinality, and descriptions indicating meaning and use of each data element.

NIBRS Master Document provides a reference guide listing document artifacts and XML elements and associations to the NIBRS specification and this *XML Developer's Guide*. Sample XML submissions have data element values for each field as part of an XML submission.

UML Documentation captures Unified Modeling Language (UML), a general developmental modeling language, to provide a standard way to visualize a system's design. The NIBRS UML

diagram provided with the IEPD consolidates the NIBRS XML submissions into multiple pages, to make it easier to understand. There are two pages with high-level models of the messages, and two pages with details for activities and people.

IEPD Samples encompass the all-fields sample, as well as Group A Incident and replace samples, Incident delete sample, Group B Arrest and delete samples, and Zero Report sample. The all-fields sample does not represent a valid data submission, but rather show the placement of every possible element. Future XML samples will provide sample scenarios, how that scenario fits into the flat file format, and the XML sample for that scenario.

3 IDs, IDREFS, ROLES, AND ASSOCIATIONS

The following section describes some NIEM concepts, which may not be familiar to many XML developers.

IDs uniquely identify an object within the XML document. These cannot start with a number and do not have a particular naming convention. These IDs use IDREFS with the document for reference. An example of an ID: `<j:Arrestee s:id="Arrestee1">`

IDREFS reference an object that has an ID. For example:

```
<nc:RoleOfPerson s:ref="PersonSubject1" />
```

Associations are used link together related objects. Associations may also contain additional properties specific to the association itself, such as the type of relationship between people. This better reflects reality than enclosing objects inside of other objects. Associations use the ID and IDREF concepts. Below is an example of an association in NIBRS:

```
<j:OffenseVictimAssociation>
  <j:Offense s:ref="Offense1" />
  <j:Victim s:ref="Victim1" />
</j:OffenseVictimAssociation>
```

Roles are special associations that link objects to temporary roles that the objects play. In NIBRS, they apply to people and organizations.

4 TYPES OF NIBRS REPORTS

The following are the types of reports that are available through a NIBRS XML submission:

- Group A Incident Report
- Group B Arrest Report
- Zero Report

4.1 XML Group A Incident Reports

Incident reports submitted to the NIBRS via XML should contain one incident per submission. Depending on circumstance and rules contained within this document, a report may contain multiple instances of the same type. Within each XML structure within the report, specific data elements are mandatory. Descriptions of the XML structures are below.

4.1.1 Message Metadata

This area of the schema provides information about the message transmission itself. The data in this section provides the following sets of data:

- Data Element – Message Timestamp
- Data Element – Message ID
- Data Element – IEPD Version
- Data Element – Submitting Agency ORI

XPATH: /nibrs:Submission/cjis:MessageMetadata

4.1.2 Report Header

This area of the schema provides the type of report being provided and the action being performed by the report (Incident Report, Delete, Replace, and Add). Add is used for Group B submissions, and Incident Report is used for Group A. See below for the additional data elements provided here.

Note: “Replace” completely replaces the submission similar to what a delete and add/insert would do.

The data elements used in the Report Header Section are:

- Data Element 1 – ORI
- Data Element – Report Category
- Data Element – Report Action
- Data Element – Month and Year of Submission

XPATH: /nibrs:Submission/nibrs:Report/nibrs:ReportHeader

4.1.3 Incident

Only one Incident Section will be accepted per Group A Incident Report. The Data Edit (Error 075) requires that each incident report contain Incident, Offense, Victim, and Subject data.

The data elements derived from the Incident Section are:

- Data Element 2 – Incident Number
- Data Element 2A – Cargo Theft Indicator
- Data Element 3 – Incident Date and Hour
- Data Element 3 – Report Date Indicator
- Data Element 4 – Cleared Exceptionally
- Data Element 5 – Exceptional Clearance Date

XPATH: /nibrs:Submission/nibrs:Report/nc:Incident

4.1.4 Offense

The Offense Section identifies and describes the types of offenses involved in the incident.

The Offense Section has an ID assigned to allow for the linkage of the offense to the victim and the location. For example: `<j:Offense s:id="Offense1">`

Check the association sections, beginning at [3 ASSOCIATIONS](#), for how this data links to other sets of data.

The data elements used in the Offense Section are:

- Data Element 6 – UCR Offense Code
- Data Element 7 – Offense Attempted Indicator
- Data Element 8 – Offender Suspected of Using
- Data Element 8A – Bias Motivation
- Data Element 10 – Number of Premises Entered
- Data Element 11 – Method of Entry
- Data Element 12 – Type Criminal Activity/Gang Information
- Data Element 13 – Type Weapon/Force Involved/Automatic Weapon Indicator

XPATH: /nibrs:Submission/nibrs:Report/j:Offense

4.1.5 Location

The Location section provides the Location Category Code and the Judicial District (federal only).

The data elements derived from the Location Section are:

- Data Element 9 – Location Category
- Data Element 1A – Judicial District (federal only)

The Location Section has an ID assigned to allow for the linkage of location to the offense. For example: `<nc:Location s:id="Location1">`

Check the association sections for how this data links to other sets of data.

XPATH: /nibrs:Submission/nibrs:Report/nc:Location

4.1.6 Item

The Item Section provides information about the type, value, and quantity of property involved in the incident.

The data elements used in the Item Section are:

- Data Element 14 – Type Property Loss/Etc.
- Data Element 15 – Property Description
- Data Element 16 – Value of Property
- Data Element 17 – Date Recovered
- Data Element 18 – Number of Stolen Motor Vehicles
- Data Element 19 – Number of Recovered Motor Vehicles

XPATH: /nibrs:Submission/nibrs:Report/nc:Item

4.1.7 Substance

The Substance Section provides information about the type, quantity, and measurement of drugs involved in an incident. This is the same structure as the Item Section with the additions of Suspected Drug Type, Estimated Drug Quantity, and Type Drug Measurement. Do not use Item

and Substance to explain the same piece of property. This section covers all details for a drug offense.

The data elements derived from the Substance Section, under the condition there is a drug offense, are:

- Data Element 14 – Type Property Loss/Etc.
- Data Element 15 – Property Description
- Data Element 16 – Value of Property
- Data Element 17 – Date Recovered
- Data Element 20 – Suspected Drug Type
- Data Element 21 – Estimated Drug Quantity
- Data Element 22 – Type Drug Measurement

XPATH: /nibrs:Submission/nibrs:Report/nc:Substance

4.1.8 Person

The Person Section provides the details about an individual person within the XML submission. Person may be used in both Group A and Group B submissions.

Person has an ID assigned within the XML, which links certain data together by reference via “Role of Person”. The appropriate places to use “Role of Person” are:

- j:EnforcementOfficialType (used for victims who are law enforcement officials and provide Data Elements 25A, 25B, and 25C)
- j:VictimType (used for individual or law enforcement official victims)
- j:SubjectType (used for all offenders)
- j:ArresteeType (used for all arrestees)

For example, if a person in the incident needs to be represented as an Arrestee, the person attribute identification could be `<nc:Person s:id="PersonArrestee1">`. The Arrestee Section links the person attributes to the role of an arrestee as seen below:

```
<j:Arrestee s:id="Arrestee1">
  <nc:RoleOfPerson s:ref="PersonSubject1" />
  ...
</j:Arrestee>
```

The data elements derived from the Person Section, with the role of person defined are:

- Data Element 26 – Age of Victim
- Data Element 27 – Sex of Victim
- Data Element 28 – Race of Victim
- Data Element 29 – Ethnicity of Victim
- Data Element 30 – Resident Status of Victim
- Data Element 37 – Age of Offender
- Data Element 38 – Sex of Offender
- Data Element 39 – Race of Offender
- Data Element 39A – Ethnicity of Offender

- Data Element 47 – Age of Arrestee
- Data Element 48 – Sex of Arrestee
- Data Element 49 – Race of Arrestee
- Data Element 50 – Ethnicity of Arrestee
- Data Element 51 – Resident Status of Arrestee

XPATH: /nibrs:Submission/nibrs:Report/nc:Person

4.1.9 Enforcement Official

The Enforcement Official Section provides information about a LEOKA victim situation within an incident.

The data elements derived from the Enforcement Official Section are:

- Data Element 25A – Type of Officer Activity/Circumstance
- Data Element 25B – Officer Assignment Type
- Data Element 25C – Officer–ORI Other Jurisdiction

For example, if a person in the incident needs to be represented as law enforcement victim, the person attribute identification could be `<nc:Person s:id="PersonVictim1">`. The Enforcement Official Section needs to reference the Person Section using a reference to the associated person ID used in the Person Section as seen in the following example:

```
<j:EnforcementOfficial s:id="LEO1">
  <nc:RoleOfPerson s:ref="PersonVictim1" />
  ...
</j:EnforcementOfficial>
In conjunction with...
<j:Victim s:id="Victim1">
  <nc:RoleOfPerson s:ref="PersonVictim1" />
  ...
</j:Victim>
```

XPATH: /nibrs:Submission/nibrs:Report/j:EnforcementOfficial

4.1.10 Victim

The Victim Section provides information about the victim(s) involved in the incident.

The Victim Section has an ID assigned to allow for the linkage of a victim to the offense and/or subject. For example: `<j:Victim s:id="Victim1">`

This section links the Person Section using a reference to the person ID for the victim when the victim is an individual or law enforcement officer (role of person is absent for other victim types). For example: `<nc:RoleOfPerson s:ref="PersonVictim1" />`

```
<j:Victim s:id="Victim1">
  <nc:RoleOfPerson s:ref="PersonVictim1" />
  ...
</j:Victim>
```

The data elements derived from the Victim Section are:

- Data Element 23 – Victim Sequence Number
- Data Element 25 – Type of Victim
- Data Element 31 – Aggravated Assault/Homicide Circumstances
- Data Element 32 – Additional Justifiable Homicide Circumstances
- Data Element 33 – Type Injury

XPATH: /nibrs:Submission/nibrs:Report/j:Victim

4.1.11 Subject

The Subject Section describes the Offender Sequence Number.

The Subject Section has an ID assigned to allow for the linkages. For example:

```
<j:Subject s:id="Subject1">
```

This section links the Person Section using a reference to the person ID for the subject. For example: `<nc:RoleOfPerson s:ref="PersonSubject1" />`

```
<j:Subject s:id="Subject1">
  <nc:RoleOfPerson s:ref="PersonSubject1" />
  ...
</j:Subject>
```

The data element derived from the Subject Section is:

Data Element 36 – Offender Sequence Number

Note: To represent an unknown number of offenders scenario, “00” is the offender sequence number and the role of person is absent. See the below example:

```
<j:Subject s:id="Subject1">
  <j:SubjectSequenceNumberText>00</j:SubjectSequenceNumberText>
</j:Subject>
```

XPATH: /nibrs:Submission/nibrs:Report/j:Subject

4.1.12 Arrestee

The Arrestee Section reports arrest details about the Arrestee involved in Group A and Group B offenses. The Arrestee Section needs an ID assigned to allow for associating the arrestee to the arrest in a subsequent part of the schema. For example: `<j:Arrestee s:id="Arrestee1">`

In addition, a reference associates the person information to the arrestee Section. For example:

```
<nc:RoleOfPerson s:ref="PersonArrestee1" />
```

The data elements derived from the Arrestee Section are:

- Data Element 40 – Arrestee Sequence Number
- Data Element 44 – Multiple Arrestees Indicator
- Data Element 46 – Arrestee Was Armed With
- Data Element 46 – Automatic Weapon Indicator
- Data Element 52 – Disposition of Arrestee Under 18

XPATH: /nibrs:Submission/nibrs:Report/j:Arrestee

4.1.13 Arrest

The Arrest Section reports arrest details involving Group A and Group B offenses.

Arrest needs an ID assigned to allow for associating the arrestee to the arrest in a subsequent part of the schema. For example: `<j:Arrest s:id="Arrest1">`

The data elements derived from the Arrest Section are:

- Data Element 41-Arrest Transaction Number
- Data Element 42-Arrest Date
- Data Element 43-Type of Arrest
- Data Element 45-UCR Arrest Offense Code

XPATH: `/nibrs:Submission/nibrs:Report/j:Arrest`

4.1.14 Arrest Subject Association

The Arrest Subject Association Section links the arrest information to the arrestee via the person complex type. Both Group A and Group B submissions use this section. This association is mandatory for Group B submissions and conditional upon arrest for Group A incidents.

This section only should provide references to IDs that are present, and already defined, elsewhere in the XML submission.

For example, this section would look like:

```
<j:ArrestSubjectAssociation>
  <nc:Activity s:ref="Arrest1" />
  <j:Subject s:ref="Arrestee1" />
</j:ArrestSubjectAssociation>
```

XPATH: `/nibrs:Submission/nibrs:Report/j:ArrestSubjectAssociation`

4.1.15 Offense Location Association

The Offense Location Association Section links the offense information to the location. This section only should provide references to other IDs that are in the XML submission. At least one Offense Location Association is mandatory for Group A incidents. This association is not to be included for Group B arrests.

For example, this section would look like:

```
<j:OffenseLocationAssociation>
  <j:Offense s:ref="Offense1" />
  <nc:Location s:ref="Location1" />
</j:OffenseLocationAssociation>
```

XPATH: `/nibrs:Submission/nibrs:Report/j:OffenseLocationAssociation`

4.1.16 Offense Victim Association

The Offense Victim Association Section links the offense information to the victim. This section only should provide references to other IDs that are in the XML submission. The data element used in the Offense Victim Association is:

- Data Element 24 – Victim Connected to UCR Offense Code

At least one Offense Victim Association is mandatory for Group A incidents. This association is not to be included for Group B arrests.

For example, this section would look like:

```
<j:OffenseVictimAssociation>
  <j:Offense s:ref="Offense1" />
  <j:Victim s:ref="Victim1" />
</j:OffenseVictimAssociation>
```

XPATH: /nibrs:Submission/nibrs:Report/j:OffenseVictimAssociation

4.1.17 Subject Victim Association

The Subject Victim Association Section links the offender or arrestee information to the victim.

The data elements used in the Subject Victim Association are:

- Data Element 34 – Offender Number(s) to be related

- Data Element 35 – Relationship(s) of Victim to Offender

This section provides references to other IDs that are in the XML submission. It also includes a victim to subject relationship.

The Subject Victim Association is conditional for Group A submissions. This depends on the type of offense and if the victim is a person, business, etc. If the victim is society, this association should not be sent. In addition, this association is not to be included for Group B arrests.

For example, this section would look like:

```
<j:SubjectVictimAssociation>
  <j:Subject s:ref="Subject1" />
  <j:Victim s:ref="Victim1" />
  <nibrs:VictimToSubjectRelationshipCode>Friend
</nibrs:VictimToSubjectRelationshipCode>
</j:SubjectVictimAssociation>
```

XPATH: /nibrs:Submission/nibrs:Report/j:SubjectVictimAssociation

4.2 Group B Arrest Reports

The Group B arrest reports have a similar structure to Group A incident reports but consist of fewer areas of the XML schema. Group B arrest reports use the following sections:

- Message Metadata

- Report Header

- Location (only for federal agencies to report Judicial District)

- Person

- Arrestee

- Arrest

- Arrest Subject Association

Look above in the Group A incident report area for the structure of these sections.

4.3 Zero Report

The Zero Report submission denotes no criminal activity during a reporting month in an law enforcement agency's (LEA's) jurisdiction.

Note: A UCR Program should not automatically generate the Zero Report for a local LEA that does not submit crime data for a particular month. A UCR Program should **ONLY** submit the Zero Report for an agency that communicates the fact that no criminal activity (offense, arrest, or recovered property) occurred in its jurisdiction for the reporting period.

The absence of crime data does not mean that no crimes occurred. The NIBRS must differentiate between (1) a zero report when no crime occurred and (2) no crime information being submitted. The presence or absence of this record in conjunction with other available data will provide the FBI with useful statistical information.

Refer to Section [6.2 Zero Report Notes](#), Zero Reporting, for additional information pertaining to the handling of zero reporting information.

Zero reports consist of the following sections:

- Message Metadata
- Report Header

Look above in the Group A Incident Report Section for the structure of these sections.

5 DATA ELEMENT DEFINITIONS

The data elements and data values identified in this section represent those required for participating in the UCR Program via the NIBRS. LEAs should use these data elements and data values to report incidents and arrests involving Group A offenses, reporting arrests involving Group B offenses, and Zero Reports.

The FBI encourages participating agencies to include additional data elements and values in their own Incident-Based Reporting (IBR) systems to satisfy their own informational needs. However, agencies should report to the FBI only those data elements and data values that are listed in this section or required within the XML schema.

5.1 Data Elements

LEAs must use a series of established data elements, i.e., data fields, within each area of the Group A Incident Report and in the Group B Arrest Report to describe the details of each component of a crime. Examples of these details include Data Element 2 (Incident Number), Data Element 6 (UCR Offense Code), and Data Element 25 (Type of Victim).

5.2 Data Values

For each data element, reporting agencies should choose the most appropriate data value(s), i.e., specific characteristics or types of the fields in the submission that have an assigned enumerated list. Although some data values require a specific format, most are codes from an enumerated list, each followed by an equal sign (=) and a description of the data value.

For example, for Data Element 27 (Sex of Victim), agencies may enter one of the codes M = Male, F = Female, or U = Unknown to describe the gender of the victim; but for Data Element 48 (Sex of Arrestee), agencies can enter only M = Male or F = Female to describe the gender of the arrestee.

5.3 Data Element Descriptions

The data elements identified in the subsequent sections are grouped by the type of data they represent (administrative data, offense data, arrestee data, etc.). Some data elements overlap and are present throughout multiple sections.

The format and definition of the attributes of the data elements are:

Group: Also known as report type, this identifies whether a data element is used in the Group A Incident Report, Group B, or Zero Report (or any combination of the three).

Format: This identifies the number of characters allowed for the data element and whether the characters must be Numeric, Alphabetic, Alphanumeric, Enumerated List, or any other data type. If there is a minimum and maximum amount of characters allowed, it uses the following structure min-max (for example, 1-32 is a min of 1 and max of 32). If a single number is provided, it must be that length. If there are any specific XML formatting it will be noted here.

Occurrence: This identifies how many times the data element occurs in a section or incident.

XPATH: The XML path within the schema where the data element resides.

Usage: Some data elements are required to have a complete/valid data submission, i.e., they are *mandatory*. Others are *conditional* based on the data values submitted for other data elements. Data elements that can be at the discretion of the submitting agency are *optional*. In some cases, the business rules may be more restrictive than the XML schema restrictions. In other words, a file that validates against the XML schema may not necessarily be a valid NIBRS submission.

Example: These provide a sample portion of XML to provide insight into how the data is structured.

Edits: This identifies specific conditions that must be met for the data element to be completed. The table includes a description of the edit as well as the associated error number. A numerical listing of Error Numbers with the associated Error Message and Error Description are located in [Section 7: Fatal Errors](#).

Data Values: This identifies the specific data values that are acceptable in completing the data element.

5.3.1 Message Metadata Data Elements

Message Metadata Data Elements provide the details of the XML submission itself.

5.3.3 Report Action

The Report Action Category Code differentiates between Incident Report, Add, Replace, and Delete. This applies to the entire submission and indicates if this is a new submission (I and A), a replace to an existing submission (R), or a deletion of a submission (D). “I” is used for Group A incident reports. “A” is used for Group B and Zero Report. “R” is used for Group A and Group B reports. “D” is used for all types of reports. “Replace” completely replaces the submission similar to what a delete and add/insert would do.

5.3.5 Data Element 1-ORI

ORI is a unique nine-character NCIC ORI that represents each agency. The NCIC assigns all ORI numbers to any agency that is going to be participating in the UCR Program. This ORI might not be the same as the ORI assigned to the same agency for NCIC reporting. Please work with the UCR Program point of contact to address ORI discrepancies.

Data Values: Valid ORI values are assigned by the NCIC and contain the characters A–Z (capital letters only) and 0–9.

5.3.6 Data Element 1A- Federal Judicial District (Federal Submissions Only)

A federal judicial district (JD) is a defined legal district that denotes a territory for which a federal court has jurisdiction. The JD describes which court will hear a federal case. Currently the United States and its territories have 95 federal judicial districts. This data element in NIBRS describes *where* the crime(s) took place by designating in which JD the incident occurred. Review the area of the *NIBRS User Manual* “Definition of an Incident” to understand time and place requirements. In NIBRS, federal agencies can reflect the incident location as the JD code to give a better geographical location of the incident.

Note: This data element is mandatory for federal submitters.

5.3.7 Data Element 2-Incident Number

Incident Number is the number assigned by the reporting agency to each Group A Incident Report to uniquely identify the incident (e.g., the LEA's case number). Incident Number may be up to 12 characters long.

As stated below in the table, see associated error 056, no Incident Number should ever repeat even if the year in which the incident occurred is different. A simple fix is to append the year to the end of the Incident Number so that you will always have unique incident numbers every year. The NIBRS allots for a 12-character Incident Number. This allows an agency to have, or store, more than 999 billion unique incidents.

Data Element 2 (Incident Number) is not used in the Group B Arrest Report. Data Element 41 (Arrest Transaction Number) represents the Incident Number in a Group B Arrest Report. See [Section 5.3.53 Arrest Transaction Number](#), for more information.

5.3.8 Data Element 2A-Cargo Theft

This data element indicates whether the incident involved a cargo theft. Please review the section within the *NIBRS User Manual* on cargo theft as it applies only to certain offenses, and should be sent only with those offenses whether it is, or is not, cargo theft.

5.3.9 Data Element 3-Incident Date and Time

Incident Date is used to enter the year, month, and day (YYYY-MM-DD) when the incident occurred or the beginning of the time-period in which it occurred, as appropriate. If the incident

hour is not known, the above format should be used. If the hour of the incident is known the format would be (YYYY-MM-DDTHH:SS:MS)

Note: When an incident occurs exactly at midnight, Data Element 3 (Incident Date) would be entered as if the time is 1-minute past midnight. For example, when a crime occurred exactly at midnight on Thursday, use Friday's date in this element. If the incident date is unknown, the date the incident was reported would be entered in this location, however, see the Report Date Indicator element for clarification.

5.3.10 Data Element 3-Report Date Indicator

5.3.11 Data Element 4-Cleared Exceptionally

Cleared Exceptionally is used to clear an incident by nonarrest circumstances outside the control of law enforcement. In a multiple-offense incident, the exceptional clearance of one offense clears the entire incident. An incident cannot be cleared exceptionally if it was previously or concurrently cleared by an arrest, i.e., if an arrestee is submitted under the same Incident Number. For more information on proper use of exceptional clearances, please see the *NIBRS User Manual*.

5.3.12 Data Element 5-Exceptional Clearance Date

5.3.13 Data Element 6-UCR Offense Code

UCR Offense Code is used to enter the data values of the Group A offenses that occurred in the incident.

Note: The offense describes the various types of offenses involved in the incident and is submitted for up to ten of the most serious Group A offenses in the incident (as determined by the reporting agency). Only one instance of offense for each reported UCR Offense Code (Data Element 6) is present in the submission, even though there may have been more than one victim of the crime. At least one offense must be submitted for each Group A Incident Report.

Note: Each offense must be reported if it is a separate, distinct crime, rather than just a part of another offense. For example, every robbery includes some type of assault, but because the assault is an element that makes up the crime of robbery, only robbery is present in the submission. On the other hand, if during a robbery the offender forces the victim to engage in sexual relations, both robbery and a sex offense should be reported because sexual intercourse without the consent of the victim is not an element of Robbery. See Table 7-6 for the [Mutually Exclusive Offenses](#).

5.3.14 Data Element 7-Offense Attempted/Completed

Offense Attempted/Completed indicates whether each offense in the incident was attempted or completed. When an offense occurs more than once within an incident and one of the offenses are completed, then the attempted indicator must be false. If a crime is only attempted, the indicator would be set to true.

Note: In NIBRS, an attempted murder offense translates to a completed aggravated assault offense. All assault offenses should be classified as false.

5.3.28 Data Element 20-Suspected Drug Type

Suspected Drug Type identifies the types of drugs or narcotics, seized or suspected, present in an incident.

The data submitter should not use this data element when drugs or narcotics were burned, stolen, etc., in connection with offenses other than Drug/Narcotic Violations such as Arson, Burglary/Breaking & Entering, or Larceny/Theft Offenses.

When an LEA sends a substance to a laboratory for analysis and is awaiting a response, the agency must enter data value U = Unknown Drug Type. The LEA would update the drug type when it received the lab results.

Note: When more than three types of drugs are involved, the two most important drugs (as determined by the reporting agency based on the quantity, value, and deadliness of the drugs/narcotics) should be reported in Drug Type 1 and Drug Type 2; X = Over 3 Drug Types should be entered in Drug Type 3.

When a substance is sent to a laboratory for analysis, and a response has not yet been received, the agency must enter data value 1 = None. The LEA would update this quantity with the true quantity with the laboratory results.

Note: When more than three types of drugs are involved, the quantity of the two most important drugs (as determined by the reporting agency based on the quantity, value, and deadliness of the drugs/narcotics) should be reported in Quantity 1 and Quantity 2; Quantity 3 should not be sent.

5.3.45 Data Element 34-Offender Number to be Related

Offender Number to be Related is used to link each offender to the victim within an incident.

The following conditions must be met:

- This data element is mandatory when one of the offenses entered in Data Element 24 (Victim Connected to UCR Offense Code) is a Crime Against Person or a Crime Against Property and Data Element 25 (Type of Victim) is I = Individual or L = Law Enforcement.
- When there is an unknown number of offenders scenario, there are no offenders (00 = Data Element 36 SubjectSequenceNumberText) and thus a Person Section would be not be created.

5.3.46 Data Element 35-Relationship of Victim to Offender

Relationship of Victim to Offender is used, along with Data Element 34 (Offender Number to be Related), to report the relationship of the victim to the offender(s) who perpetrated a Crime Against Person or a Crime Against Property against the victim.

When more than 10 offenders associate to an individual victim, enter the relationship of the 10 most closely related to the victim. For example, when one of the offenders is the brother of the victim and the other 15 offenders were acquaintances of the victim, enter the information for the brother and 9 of the offenders who were acquaintances.

Note: Do not send this element when Data Element 36 (Offender Sequence Number) is 00 = Unknown Offender. This can occur 9,990 times because you can have 999 victims and 10 subject associations per victim.

Data Element 35	(Relationship of Victim to Offender) cannot be entered when Data Element 34 (Offender Number to be Related) is zero. Zero means that the number of offenders is unknown; therefore, the relationship cannot be entered.	468
Data Element 35	(Relationship of Victim to Offender) has a relationship of VO = Victim Was Offender. When this code is entered, a minimum of two victim and two Offender Sections must be submitted. In this case, only one victim and/or one Offender Sections was submitted. The entry of VO on one or more of the victims indicates situations such as brawls and domestic disputes. In the vast majority of cases, each victim is also the offender; therefore, every victim record would contain a VO code. However, there may be some situations where only one of the victims is also the offender, but where the other victim(s) is not also the offender(s).	470

5.3.47 Data Element 36-Offender Sequence Number

Offender Sequence Number assigns a sequence number from 01–99 for each offender in an incident.

Each offender should have a Subject Section (up to 99) in the incident. There must be at least one Subject Section in each incident report.

Note: When nothing is known about the offender, then 00 = Unknown Offender must be entered in Data Element 36 (Offender Sequence Number) and Data Elements 37 through 39 should not be sent. For example, when a murder happens and there are no eyewitnesses or other information that would provide data about possible offenders, 00 represents the Offender Sequence Number. However, when witnesses report five offenders running from the scene of a murder, and their age, sex, or race are not known, five Offender Sections should be submitted indicating the appropriate data elements (Age of Offender, Sex of Offender, Race of Offender, etc.) which would be unknown. See [Subject Section 4.1.11](#) for more information about representing an unknown number of offenders.

	In this case, multiple offenders were submitted, but one of the sections contains the 00 = Unknown value.	
Data Element 36	(Offender Sequence Number) contains 00 indicating that nothing is known about the offender(s) regarding number and any identifying information. In order to exceptionally clear the incident, the value cannot be 00. The incident was submitted with Data Element 4 (Cleared Exceptionally) having a value of A through E.	557
Data Element 36	(Offender Sequence Number) The incident was submitted with Data Element 6 (UCR Offense Code) value of 09C = Justifiable Homicide or 360 = Failure to Register as a Sex Offender*, but unknown information was submitted for all the offender(s). At least one of the offenders must have known information for age, sex, and race. *Denotes offenses for federal and tribal LEA reporting only	559
Data Element 36	A Group A Incident Report was submitted with more arrestees than offenders. The incident must be resubmitted with additional offenders. This message will also occur if an arrestee was submitted and Data Element 36 (Offender Sequence Number) was 00 = Unknown.	656

Data Values:

01–99	Years Old
UNKNOWN	Unknown (NIBRS Code = 00)

5.3.48 Data Element 37-Age of Offender

Age of Offender indicates the age of the offender. The data value for Age of Offender may be an exact age, a range of years, or unknown.

For an exact age, use MeasureIntegerValue. To enter an age range, use MeasureIntegerRange. To enter UNKNOWN use MeasureValueText.

When submitting Age of Offender as an age range (i.e., 16 through 19), the system will store the average age, decimal value truncated. For example, when the age range is 16 through 19, the average is 17.5 years old and is stored as 17 years.

5.3.56 Data Element 44-Multiple Arrestee Indicator

Multiple Arrestee Indicator is used to ensure that an arrestee is counted only once when the arrestee's apprehension causes the reporting agency to submit two or more Arrestee Sections concerning separate Group A Incident Reports. See the *NIBRS User Manual* for more details.

When the arrestee was involved in more than one crime and is arrested, enter C = Count Arrestee in one of the Arrestee data and enter M = Multiple in all of the remaining Arrestee data. When the arrest does not cause the reporting agency to submit multiple Arrestee data for the same arrestee, N = Not Applicable should be entered.

Automatic Weapon Indicator is used to indicate whether a firearm identified in Data Element 46 (Arrestee Was Armed With) is an automatic firearm (i.e., any firearm that shoots or is designed to shoot more than one shot at a time by a single pull of the trigger without manual reloading). The Automatic Weapon Indicator is represented by an A appended onto the appropriate codes.

6 SUBMISSION NOTES

6.1 Victim/Offender/Arrestee Sequence Numbers Can Have Gaps

Multiple Victim, Offender, and Arrestee Sections can have gaps in values entered into Data Elements 23 (Victim Sequence Number), 36 (Offender Sequence Number), and 40 (Arrestee Sequence Number). For instance, when four Offenders are present in a submission, the sequence numbers would normally be 01, 02, 03, and 04; but could be 02, 03, 05, and 07.

The gaps in numbers could occur, for instance, where all offenders are initially entered into the LEA's database with consecutive sequence numbers. Then, there is the deletion of one of the offenders information, thus possibly leaving a gap in the sequence numbers. It would be unnecessary for agencies to renumber these numbers as long as the adjusted sequence numbers match their applicable Person Sections and are associated with the correct victims.

When a Group A Incident or Group B Arrest Report is submitted by an agency for a specific month/year, and a Zero Report indicator is already on file for that agency's month/year, UCR will process the submission and automatically remove the Zero Report Indicator.

6.2 Zero Report Notes

The Zero Report shows that the LEA has no crime, arrests, or recovered property to report for the given month. To compute valid crime rates and trends, the FBI must be able to identify months during which no criminal activity occurred.

When a Zero Report (Report Action Category Code of A) is submitted by (or on behalf of) an agency for a specific month/year, and a Group A Incident or Group B Arrest Report is already on file, UCR will generate a Cannot Add Zero Report error (Zero Report Error 028 or 029, respectively). When a Zero Report (Report Action Category Code of D) is submitted by (or on behalf of) an agency for a specific month/year, and a Group A Incident or Group B Arrest Report

is already on file, UCR will generate a Cannot Delete Zero Report error (Zero Report Error 030 or 031, respectively).

When a Group A Incident Report or Group B Arrest Report is submitted by an agency for a specific month/year, and a Zero Report Indicator is already on file for that agency's month/year, UCR will process the submission and automatically remove the Zero Report indicator.

Zero Report structure in XML follows the same Message Metadata and Report Header.

7 **FATAL ERRORS**

This section describes error codes and error handling related to submissions. The FBI returns submissions with fatal errors to the submitting agency for correction.

7.1 **Error Numbers and Messages**

This reference listing provides all of the error numbers that are returned, their associated error messages, and brief descriptions of the errors.

The error numbers and their associated error messages are below in numerical order by type. Brief descriptions of each error follow.

7.1.1 **Structure Check Errors**

Table 7-1 Structure Check Errors

Structure Check Errors

094	ZERO REPORT MONTH/YEAR EXCEEDED MONTH/YEAR OF SUBMISSION	A Segment Level 0 was submitted with a month and year that was later than the Month of Electronic submission and Year of Electronic submission.

096	ZERO REPORT MONTH & ZERO REPORT YEAR CANNOT BE ON OR AFTER DATE AGENCY IS PLACED ON COVERED-BY STATUS	The combined Zero Report Month and Zero Report Year cannot be on or after the date an LEA is placed in Covered-by Status. When Zero Report data are received for a LEA in Covered-by Status, the FBI will remove the agency from Covered-by Status, process the submission, and notify the agency. Additionally, adjustments to previously submitted data from an agency now in Covered-by Status will be processed and no error generated.

935	NIBRS CERTIFICATION DATE DOES NOT EXIST	Data was submitted by an agency that does not have a NIBRS certification date set in the FBI database. Agencies and/or state programs must first pass a testing phase to achieve NIBRS certification and then the FBI reference data administrator can enter a certification date into the system.
937	PRE-NIBRS INCIDENT RECEIVED	An incident has been submitted with an incident date that predates the agency's NIBRS start date. Pre-NIBRS incidents are submitted to add additional information that occurred after the NIBRS start date for crimes that occurred when the agency was still submitting Summary data. For example, a burglary was submitted via SRS in January. The agency started submitting via NIBRS February 1st. An offender was arrested for the January burglary in February. The agency will send a NIBRS incident with the new information of an arrest. We will only count the arrest in the database, since the offense itself is Pre-NIBRS and would have previously been reported via a Summary submittal.
938	MULTIPLE INCIDENTS ON FILE	Action Type of "A" is used, and there are multiple incidents on file for the same agency/incident number.
939	CANNOT MODIFY PRE-NIBRS GROUP B INCIDENT	Action Type of "M" is used for a Group B Arrest, and the Arrest Date is before the agency transitioned to NIBRS.
940	EXCEPTIONAL CLEARANCE ALREADY ON FILE	Agency is trying to add an exceptional clearance and the incident has already been exceptionally cleared either by circumstances or arrest.
941	WEB SERVICE SUBMISSION ALREADY IN PROCESS	Agency is trying to perform any insert or replace action for a Group A/Group B Incident while an action is currently pending for the same agency/incident number in web services.

101	MUST BE PRESENT—MANDATORY FIELD	The referenced data element in an incident must contain data when the referenced data element is mandatory or when the conditions are met for data that must be entered into a conditionally mandatory field.
105	INVALID DATA VALUE FOR DATE	The data element in error contains a date that is not entered correctly. Each component of the date must be valid; that is, months must be 01 through 12, days must be 01 through 31, and year must include the century (i.e., 19xx, 20xx). In addition, days cannot exceed maximum for the month (e.g., June cannot have 31days). Also, the date cannot exceed the current date.
106	INVALID DATA VALUE FOR HOUR	(Incident Hour) For offenses of 09A, 13A, 13B and 13C only - When Data Element 25 (Type of Victim) is L = (Law Enforcement Officer), then Data Element 3 (Incident Date/Hour) must be populated with a valid hour (00-23). Incident Hour Unknown (Blank) is not a valid entry.

170	INCIDENT DATE CANNOT BE AFTER MONTH AND YEAR OF ELECTRONIC SUBMISSION	Data Element 3 (Incident Date/Hour) The date cannot be later than the year and month the electronic submission represents. For example, the May 1999 electronic submission cannot contain incidents happening after this date.
172	INCIDENT DATE/HOUR FOR "I" RECORDS CANNOT PREDATE 01/01/1991	Data Element 3 (Incident Date) cannot be earlier than 01/01/1991. This edit will preclude dates that are obviously incorrect since the FBI began accepting NIBRS data on this date.

Administrative Errors		
Error Number	Error Message	Error Description
173	INCIDENT DATE CANNOT BE BEFORE DATE ORI WENT IBR	A Group A Incident Report was submitted with Data Element 3 (Incident Date/Hour) containing a date that occurred before the agency converted over to NIBRS. Because of this, the record was rejected. At some point, the participant will convert its local agencies from SRS to IBR. Once the participant starts to send NIBRS data for a converted agency to the FBI, any data received from this agency that could possibly be interpreted as duplicate reporting within both the SRS and NIBRS for the same month will be rejected by the FBI. In other words, if the participant sends IBR data for an agency for the first time on September 1999, monthly submittal, dates for incidents, recovered property, and arrests must be within September. The exception is when exceptional clearances occur for a pre-IBR incident. In this case, Data Element 3 (Incident Date/Hour) may be earlier than September 1999, but Data Element 5 (Exceptional Clearance Date) must be within September 1999. The FBI will reject data submitted for prior months. Thereafter, all data coming from this agency must have dates subsequent to the initial start date of September 1999, except as mentioned previously. The SRS contains aggregate data for the months prior to NIBRS conversion. If the FBI were to accept IBR data for months previously reported with Summary data, the result would be duplicate reporting for those months.
197	MISSING INCIDENT DATE FOR DELETE	(Incident Date) is missing f.or a Group A Incident Report with a Report Action Category Code of D = Delete; must be populated with a valid data value and cannot be blank.
199	MISSING INCIDENT DATE FOR DELETE - INCIDENT NUMBER MATCHES MULTIPLE GROUP A INCIDENT REPORTS	(Incident Date) is missing for a Group A Incident Report with an Action Type of D = Delete; must be populated with a valid data value and cannot be blank. Incident Number matches multiple Group A Incident Reports.

456	MULTIPLE VALUES ENTERED FOR DATA ELEMENT ARE NOT COMPATIBLE – VALUES ARE MUTUALLY EXCLUSIVE	Data Element 31 (Aggravated Assault/Homicide Circumstances) was entered with two entries but was rejected for one of the following reasons: <ol style="list-style-type: none"> 1) 10 = Unknown Circumstances is mutually exclusive with any other value. 2) Multiple values from more than one category were entered. 3) Values from the category 09B = Negligent Manslaughter are mutually exclusive with any other value. 4) Values from the category 09C = Justifiable Homicide are mutually exclusive with any other value.
457	WHEN DATA ELEMENT 32 IS ENTERED, DATA ELEMENT 31 MUST EQUAL 20 OR 21	(Additional Justifiable Homicide Circumstances) was entered, but Data Element 31 (Aggravated Assault/Homicide Circumstances) does not reflect a justifiable homicide circumstance.

All other codes, including 07 = Mercy Killing, are not valid because they do not relate to an aggravated assault.
463	INVALID AGGRAVATED ASSAULT/HOMICIDE FOR 09C OFFENSE	(Aggravated Assault/Homicide Circumstances) When a Justifiable Homicide is reported, Data Element 31 (Aggravated Assault/Homicide Circumstances) may only have codes of 20 = Criminal Killed by Private Citizen or 21 = Criminal Killed by Police Officer. In this case, a code other than the two mentioned was entered.
464	ENTRY FOR TYPE OF VICTIM MUST BE "I" WHEN THIS OFFENSE CODE IS ENTERED	(Type of Victim) Must have a value of I = Individual or L = Law Enforcement Officer when Data Element 24 (Victim Connected to UCR Offense Code) contains a Crime Against Person.

When this code is entered, a minimum of two victim and two Offender Sections must be submitted. In this case, only one victim and/or one Offender Section was submitted. The entry of VO on one or more of the victims indicates situations such as brawls and domestic disputes. In the vast majority of cases, each victim is also the offender; therefore, every victim record would contain a VO code. However, there may be some situations where only one of the victims is also the offender, but where the other victim(s) is not also the offender(s).

502	CONTAINS NONNUMERIC ENTRY	Data Element 36 (Offender Sequence Number) must contain numeric entry (00 through 99).
504	INVALID DATA VALUE	The referenced data element must contain a valid data value when it is entered; blank is permissible on nonmandatory fields.
509	CONTAINS NONNUMERIC ENTRY	Data Element 37 (Age of Offender) contains more than two characters indicating a possible age-range is being attempted. If so, the field must contain a numeric entry of four digits.
510	FIRST AGE MUST BE LESS THAN SECOND FOR AGE RANGE	Data Element 37 (Age of Offender) was entered as an age-range. Accordingly, the first age component must be less than the second age.
517	CANNOT HAVE CHARACTERS OTHER THAN A–Z, 0–9, AND/OR HYPHEN, AND/OR BLANKS	<p>Must contain a valid character combination of the following:</p> <ul style="list-style-type: none"> • A–Z (capital letters only) • 0–9 • Hyphen <p>Example: 11-123-SC is valid, but 11+123*SC is not valid.</p>
522	AGE RANGE CANNOT HAVE “00” IN FIRST TWO POSITIONS	Data Element 37 (Age of Offender) was entered as an age-range. Therefore, the first age component cannot be 00 = Unknown.
550	OFFENDER IS SPOUSE, BUT AGE IS LESS THAN 13	(Age of Offender) cannot be less than 13 years old when Data Element 35 (Relationship of Victim to Offender) contains a relationship of SE = Spouse.
551	DUPLICATE SUBJECT	When a Group A Incident Report is submitted, two Subject Sections were submitted having the same entry in Data Element 36 (Offender Sequence Number). Duplicate values should not be sent.
552	CANNOT BE PRESENT WHEN OFFENDER NUMBER IS “00” UNKNOWN	Data Element 37 (Age of Offender) cannot be entered when Data Element 36 (Offender Sequence Number) is 00 = Unknown.

Offender Errors		
Error Number	Error Message	Error Description
554	AGE OF VICTIM AND OFFENDER DOES NOT REFLECT THE RELATIONSHIP	<p>(Age of Offender) has a relationship that is inconsistent with the offender's age. The age of the victim, and/or offender, must reflect the implied relationship. For example, if the relationship of the victim to offender is PA = Parent, then the victim's age must be greater than the offender's age. The following relationships must be consistent with the victim's age in relation to the offender's age:</p> <p><i>Relationship Victim's Age Is</i></p> <p>CH = Victim was Child (Younger) PA = Victim was Parent (Older) GP = Victim was Grandparent (Older) GC = Victim was Grandchild (Younger)</p>
555	OFFENDER "00" EXISTS—CANNOT SUBMIT MORE OFFENDERS	(Offender Sequence Number) When multiple Offender Sections are submitted, none can contain a 00 = Unknown value because the presence of 00 indicates that the number of offenders is unknown. In this case, multiple offenders were submitted, but one of the sections contains the 00 = Unknown value.
556	OFFENDER AGE MUST BE NUMERIC DIGITS	Data Element 37 (Age of Offender) must contain numeric entry of 00 through 99.
557	OFFENDER SEQUENCE NUMBER CANNOT BE UNKNOWN IF INCIDENT CLEARED EXCEPTIONALLY	(Offender Sequence Number) contains 00 indicating that nothing is known about the offender(s) regarding number and any identifying information. To exceptionally clear the incident, the value cannot be 00. The incident was submitted with Data Element 4 (Cleared Exceptionally) having a value of A through E.
558	AT LEAST ONE OFFENDER MUST HAVE KNOWN VALUES	(Offender) None of the Offender Sections contain all known values for age, sex, and race. When an incident is cleared exceptionally (Data Element 4 contains an A through E), one offender must have all known values.
559	<p>OFFENDER DATA MUST BE PRESENT IF OFFENSE CODE IS 09C = JUSTIFIABLE HOMICIDE OR 360 = FAILURE TO REGISTER AS A SEX OFFENDER*</p> <p>*Denotes offenses for federal and tribal LEA reporting only</p>	<p>(Offender Sequence Number) The incident was submitted with Data Element 6 (UCR Offense Code) value of 09C = Justifiable Homicide or 360 = Failure to Register as a Sex Offender*, but unknown information was submitted for all the offender(s). Offender Errors		
Error Number	Error Message	Error Description
560	VICTIM'S SEX CANNOT BE SAME FOR ALL OFFENDERS FOR OFFENSES OF RAPE	(Offender) must contain a data value for at least one offender in Data Element 38 (Sex of Offender) that is not the same sex that is entered in Data Element 27 (Sex of Victim) when Data Element 6 (UCR Offense Code) is 11A = Rape. The offender must be connected to the victim in Data Element 34 (Offender Number to be Related) unless offender number in Data Element 34 (Offender Number to be Related) is 00 = Unknown.

604	INVALID DATA VALUE	The referenced data element must contain a valid data value when it is entered; blank is permissible on nonmandatory fields.
605	INVALID ARREST DATE	The date cannot be later than that entered within the Month of Electronic submission and Year of Electronic submission fields on the data record. For example, if Month of Electronic submission and Year of Electronic submission are 06/1999, the arrest date cannot contain any date 07/01/1999 or later.
606	ERROR-DUPLICATE VALUE = [value]	Data Element 46 (Arrestee Was Armed With) The referenced data element in error is one that contains multiple data values. When more than one code is entered, none can be duplicate codes.
607	ERROR-MUTUALLY EXCLUSIVE VALUE = [value]	Data Element 46 (Arrestee Was Armed With) can have multiple data values and was entered with multiple values. However, 01 = Unarmed cannot be entered with any other data value.

653	FOR AGE GREATER THAN 17 DISPOSITION SHOULD NOT BE ENTERED	(Disposition of Arrestee Under 18) was entered, but Data Element 47 (Age of Arrestee) is 18 or greater. Whenever an arrestee's age indicates an adult, the agency cannot enter the juvenile disposition because it does not apply.

Arrestee Errors		
Error Number	Error Message	Error Description
656	THIS ARRESTEE EXCEEDED THE NUMBER OF OFFENDERS ON THE GROUP A INCIDENT	A Group A Incident Report was submitted with more arrestees than offenders. The incident must be resubmitted with additional offenders. This message will also occur if an arrestee was submitted and Data Element 36 (Offender Sequence Number) was 00 = Unknown.
661	ARRESTEE SEQUENCE NUMBER ALREADY EXISTS	Arrestee cannot contain duplicate data values in Data Element 40 (Arrestee Sequence Number) when two or more arrestees are submitted for the same incident. Data Element 41 (Arrest Transaction Number) is the number assigned by the reporting agency to an arrest report to identify it uniquely. If multiple arrestees are reported, each having the same data value in Data Element 40, ensure that Data Element 41 is unique for each arrestee submitted to ensure that duplication does not occur.
664	ARRESTEE AGE MUST BE NUMERIC DIGITS	Data Element 47 (Age of Arrestee) does not contain a numeric entry of 00 through 99 for an exact age.
665	ARREST DATE CANNOT BE BEFORE THE INCIDENT START DATE	(Arrest Date) cannot be earlier than Data Element 3 (Incident Date/Hour). A person cannot be arrested before the incident occurred.
667	INVALID ARRESTEE SEX VALUE	(Sex of Arrestee) does not contain a valid code of M = Male or F = Female. Note: U = Unknown (if entered) is not a valid sex for an arrestee.
669	NO ARRESTEE RECORDS ALLOWED FOR A JUSTIFIABLE HOMICIDE	Group A Incident Reports cannot have arrests when Data Element 6 (UCR Offense Code) is 09C = Justifiable Homicide. By definition, a justifiable homicide never involves an arrest of the offender (the person who committed the justifiable homicide).
670	JUSTIFIABLE HOMICIDE CANNOT BE AN ARREST OFFENSE CODE	(UCR Arrest Offense Code) was entered with 09C = Justifiable Homicide. This is not a valid arrest offense.

7.2 Warning Errors

The FBI's UCR Program performs a series of checks known as 'Warning Errors' on the information provided by the state UCR programs. Unlike a fatal error, which stops the data from entering the database completely, the system accepts incident data with warning errors. In most cases, these checks are automated processes that look for data submissions that are outside of the normal reporting parameters. This does not mean that the data is incorrect; it simply means the data requires further analysis to ensure the information provided was accurate. The table below addresses the warning number and a description of the Warning Error checks. The FBI's UCR Program will be adding more to this table over time.

A.3 Summary of Federal Additions

The changes to the NIBRS includes an additional Data Element 1A (Federal Judicial District) and additional offenses, reported only by federal and tribal LEAs, listed in [Group A Offenses](#) and [Group B Offenses](#). Other changes include removing segment specific language that referred to flat file details and modifying error messages, warnings messages, and data element edits to reflect the same. Also, in the “Types of NIBRS Report” section, details of the XML structure of a NIBRS submission are visually shown in figures.

APPENDIX B: PRE-NIBRS INCIDENTS

The FBI establishes a NIBRS start date for an agency when the system receives the first NIBRS incident for an agency by the UCR system from a Group A Incident Report, Group B Arrest, or Zero Report. Regardless of the day within the month, the NIBRS start date will reflect the month and year of the incident, Group B Arrest, or Zero Report. For example, the FBI receives a submission from Texas. This submission includes an incident reported by an agency within Example City, TX, with the ORI (TX0180000). The incident date, within the NIBRS record is March 3, 2018, and represents the first NIBRS incident the FBI UCR Program ever received for Example City, TX. The NIBRS start date for Example City, TX, will be 03/2018 and the system will automatically generate this date and reference it for handling pre-NIBRS incidents.

Once the NIBRS start date is established, the NIBRS reporting flag will be set within the UCR system. The UCR system will automatically flip the reporting flag when the agency is associated to a State Agency Identifier (SAI) that has a NIBRS certification date. The NIBRS start date **cannot** be set prior to the NIBRS certification date.

If a complete NIBRS incident is received for Example City, TX, that is before the NIBRS start date, the system will accept the incident into the database as a pre-NIBRS incident. The UCR Program will only count arrest, clearance, or recovered property for each pre-NIBRS incident within a submission. The counts obtained from the three data elements will only be used during a current reporting year. If the complete incident is outside of the current reporting year, the data will be stored but ignored for all publication purposes. To clarify the term current reporting year, the UCR Program establishes the timeframe in which crime data is accepted for annual publication. This timeframe is a general reference to accept annual crime data past the calendar year. In practice, the *2018 Crime in the United States* publication is sourced by submissions from January 2018 to May 2019 to construct the tables within the publication.

Therefore, it is imperative that the federal, state, or tribal UCR program and FBI UCR Program work closely to determine the correct NIBRS start dates for each agency to avoid confusion and duplication of count. As a safeguard against duplication, the UCR system will count SRS data in the unlikely event NIBRS data was reported for the same month.

The following statements for the stated policy:

- If a NIBRS agency submits SRS data that is dated prior to the NIBRS start date, the system will accept the data.
- If a NIBRS agency submits SRS data that is dated after the NIBRS start date, the system will automatically reject the data.
- If Example City, TX, has a NIBRS start date of June 2019 and a complete NIBRS incident is submitted with an arrest date of May 30, 2019, this incident will not be used for arrests, clearances, and/or property recovery as the agency was not NIBRS certified until June 2019. This data should be submitted via SRS.

APPENDIX C: MANDATORIES

This section sets forth the requirements for reporting data elements to the FBI.

A. Data Element Requirements

There are two sets of reporting requirements:

1. Group A Incident Report Data Elements—There are two subsets of these data elements:
 - Common Data Elements—These are data elements which are applicable to all Group A offenses.
 - Additional Data Elements—These are data elements that are also applicable to individual Group A offenses. They are in addition to the common data elements and complete the reporting requirements for Group A offenses.
2. Group B Arrest Report Data Elements—These data elements are applicable to arrests for Group B offenses. They are a subset of the data elements used for Group A offenses.

B. Mandatory versus Optional Data Elements

Data elements designated as mandatory must have data values entered for them in data records submitted to the FBI, or the reports to which they relate will be rejected as containing errors. Examples of mandatory data elements are ORI, Incident Number, and Incident Date/Hour. If an incident report submitted on the electronic submission lacks entries for the ORI Number, Incident Number, or Incident Date/Hour, the report will be rejected.

Some mandatory data elements require a condition to arise before they must have data entered.

They have an *If statement* associated with them stating the condition to be fulfilled which will require their presence.

- Example: If Cleared Exceptionally does not = N (Not Applicable)
Exceptional Clearance Date = Data of the clearance

This means that if any code but N = Not Applicable was entered into Data Element 4 (Cleared Exceptionally); the date of the clearance must be entered into Data Element 5 (Exceptional Clearance Date).

Data elements designated as optional may or may not have data values entered into them, at the option of the agency submitting the data records to the FBI. The lack of a data value will not cause the report to be rejected as an error. The five optional data elements are:

1. Data Element 29 (Ethnicity of Victim)
2. Data Element 30 (Resident Status of Victim)
3. Data Element 50 (Ethnicity of Arrestee)
4. Data Element 51 (Resident Status of Arrestee)
5. Data Element 39A (Ethnicity of Offender)

The following example shows that it is up to the submitting agency's discretion whether Data Element 29 (Victim Ethnicity) and Data Element 30 (Victim Resident Status) will be reported, but the age, race, and sex of the victim must be reported. However, in order to be reported, the victim must be an I = Individual or L = Law Enforcement Officer.

If Type of Victim = Individual or Law Enforcement Officer

Age of Victim

Sex of Victim

Race of Victim

Ethnicity of Victim (Optional)

Resident Status of Victim (Optional)

C. Required Data Values

In some instances, one or more data values appear within parentheses immediately following a data element assigned to an offense. This means that those data values are required in the sections (i.e., Property, Victim, etc.) submitted to the FBI for that offense, and if other data values are entered, the FBI's computer will reject the report as containing an error.

Note: When more than one offense is involved in an incident, there can be different data value requirements for the segments relating to them.

Example 1: For all Crimes Against Persons (Assault Offenses, Homicide Offenses, etc.), Type of Victim (I) means that the submitting agency must enter I = Individual into Data Element 25 (Type of Victim) of the Victims relating to those offenses. If any other type of victim code is entered into the victim submitted for one of these offenses (B = Business or S = Society/Public), the FBI's computer will reject the report as containing an error.

Example 2: For all Crimes Against Society (Drug/Narcotic Offenses, Gambling Offenses, etc.), Type of Victim (S) means that the submitting agency must enter S = Society/Public into Data Element 25 (Type of Victim) of the Victims relating to those offenses. If any other type of victim code is entered into the Victim submitted for one of these offenses (I = Individual or B = Business), the FBI's computer will reject the report as containing an error.

Example 3: If both a Crime Against Person and a Crime Against Society were involved in the same incident, I = Individual should be entered into the victim for the Crime Against Person, and S = Society/Public should be entered into the victim for the Crime Against Society.

Example 4: The following example shows that if the offense (e.g., arson) was only attempted (no fire resulted), then the type of property loss/etc. must be either None or Unknown.

- If Offense Attempted/Completed = True
Type Property Loss = None or Unknown

Example 5: The following example shows if the offense (e.g., arson) is completed, then a Property must be submitted which has the type of property loss/etc. designated within the parentheses (Burned) entered into Data Element 14 (Type of Property Loss), provide Data Element 15 (Property Description), and provided Data Element 16 (Value of Property). If any other type of property loss/etc. was entered by the submitting agency (e.g., None, Counterfeited, Destroyed/Damaged/Vandalized, Stolen, etc.), the FBI's computer will reject the report as containing an error.

Note: In a multiple-offense incident, other Crimes Against Property may be involved which could call for the other types of property loss/etc. For example, if a single incident involved both arson and burglary, then a Property containing burned and another property containing stolen could be submitted for the incident.

- If Offense Attempted/Completed = False
Type Property Loss = Burned
Property Description
Value of Property

Example 6: The following example shows if an Offender Sequence Number was assigned data were entered describing a subject), then victim-to-offender association data must be entered Data Element 34 (Offender Numbers to be Related) and subject-to-victim relationship data must also be present (Data Element 35-Relationships of Victim to Offenders).

- If Offender Sequence Number does not = 00 (Unknown)
Offender Number to be Related
Relationship of Victim to Offender
